

Introducing:

Andrew Shah
Head of Radiation Protection

What do you enjoy about your role?

The thing I most like about my role in clinical science is delivering a service that helps support safe x-ray imaging at a number of NHS Trusts where hundreds of thousands of x-rays are performed every year.

Our team is dedicated to protecting patients who undergo imaging with ionising radiation, as well as advising on safe practices, effective examination and reducing the likelihood of radiation incidents.

We advise on safe use of x-ray imaging systems, including procurement, routine testing and optimisation

A CT scanner uses x-rays to produce detailed axial images of the body to aid patient diagnosis and treatment
