website: <https://oaks.libguides.com/lister>

Tel: 01438 285520

Date: February, 2025

Purpose

This document presents a compilation of publications authored by East and North Hertfordshire NHS Trust (ENHT) staff in the year 2024.

Approach

The ENHT Trust Knowledge and Library Services (KLS) staff conducted comprehensive searches across EMBASE, MEDLINE, PubMed, CINAHL, and EMCARE databases on behalf of the Research and Development team to identify articles authored by ENHT staff affiliated with any of the Trust's hospital locations.

To maximise the retrieval of published works, various combinations of ENHT site names were utilised (refer to Appendix A). The findings were imported into Refworks for deduplication and organised in an Excel spreadsheet for further analysis and verification. Search terms such as 'Mount Vernon', 'Lister Hospital' and 'QE II Hospital' present complexities, as it is not always evident that the authors are associated with ENHT; these names may also appear in other regions of the UK or in countries like the USA and Australia. A manual review was conducted to confirm that the authors' institutional affiliations correspond to ENHT, and URLs/DOIs were included for validation.

The search yielded numerous publications that did not explicitly cite ENHT as the institution, instead referring to site names like "Lister Hospital" (LIS) or Mount Vernon Cancer Centre (MVCC) etc., and in some instances, the site name was omitted altogether. Whilst extensive efforts were made to identify all published articles, the results in this report may not fully reflect the total number of publications. The search terms used are detailed in Appendix A.

The references have been organised into a table below to indicate the locations of the authors and instances of co-authorship with the University of Hertfordshire (UH).

Findings

During the timeframe from January 2024 to December 2024, the search identified 348 distinct references authored by East and North Hertfordshire NHS Trust staff, of which 35 were jointly published with the University of Hertfordshire. The findings include 31 systematic reviews/meta-analyses and 12 randomised controlled trials.

The main highlights are:

- The publications encompass a diverse array of research fields.
- Many publications result from collaborations with various organisations.
- Research findings are disseminated in several high impact journals.
- Various staff groups play a role in contributing to research publications.
- For the majority of articles, the type of publication is specified, where this information has been obtainable from the database.

Certain articles are available for download by clicking the provided URL links and logging in with your NHS Open Athens credentials. For articles that are not directly accessible through these links, you may request them from the KLS by filling out the [online request form](#). Typically, articles will be delivered in

electronic format at no cost. Although we strive to ensure the accuracy of this report, the KLS team cannot guarantee that all publications have been identified. We welcome your feedback and any notifications of amendments. Please reach out to the KLS team via email librarylister.enh-tr@nhs.net.
