Purpose

This document presents a compilation of publications authored by East and North Hertfordshire Teaching NHS Trust (ENHT) staff in the year 2025.

Approach

The ENHT Trust Knowledge and Library Services (KLS) staff performed thorough searches across MEDLINE, EMBASE, Cochrane, PubMed, EMCARE and CINAHL databases for the Research and Development Department to locate articles written by ENHT staff affiliated with any of the Trust's hospital locations.

In order to maximise the retrieval of published works, different combinations of ENHT site names were used (refer to Appendix A). The results were imported into Refworks for deduplication and organised in an Excel spreadsheet for further analysis and verification. Search terms such as 'Mount Vernon', 'Lister Hospital' and 'QE II Hospital' present complexities, as it is not always clear that the authors are associated with ENHT; these names may also appear in other regions of the UK or in countries like the USA and Australia. A manual review was conducted to ensure that the authors' institutional affiliations matched ENHT, and URLs/DOIs were incorporated for validation.

The search produced many publications that did not directly reference ENHT as the institution, but rather mentioned the names of the sites "Lister Hospital" (LIS), Mount Vernon Cancer Centre (MVCC) etc., and in some instances, the site name was completely omitted. Despite significant efforts to locate all published articles, the findings presented in this report may not completely represent the total number of publications available. The search strategy is outlined in Appendix A.

The references have been arranged in the table below to show the locations of the authors and instances of co-authorship with the University of Hertfordshire (UH).

Findings

The search found 321 unique references written by staff, between January to December 2025, with 34 of these being co-published with the University of Hertfordshire. The results include 43 systematic reviews/meta-analyses and 20 randomized controlled trials.

The highlights include:

- The publications cover a wide range of research disciplines.
- Numerous publications result from collaborations with different organisations.
- Research results are shared in several high impact journals.
- Different staff groups contribute to the creation of research publications.
- For most articles, the publication type is indicated, provided that this information is accessible from the database.

Certain articles can be downloaded by clicking on the provided URL links and logging in with your NHS Open Athens credentials. For articles that are not directly accessible via these links, you may request them from the KLS by filling out the [online request form](#). Generally, articles are provided in electronic

format free of charge. While we make every effort to ensure the accuracy of this report, the KLS team cannot guarantee that all publications have been found. We appreciate your feedback and any notifications regarding changes. Please contact the KLS team via email: librarylister.enh-tr@nhs.net.
